PROFESSIONAL SUMMARY

Software Engineer specializing in building full-stack web applications, from pixel-perfect React interfaces to production-grade backend APIs. Recent work includes compliance-level API infrastructure for a government e-invoicing mandate, campus-scale infrastructure fixes, and AI-integrated products serving early-stage startups. Comfortable across the stack, with a bias toward clean, maintainable code and systems that hold up in production. Adept at delivering responsive, accessible, and maintainable solutions while collaborating in Agile teams.

WORK EXPERIENCE

Software Engineer & IT Support (NYSC Corps Member)

May 2026 - Present

Landmark University

- Rebuilt the university's entertainment streaming platform, diagnosing and resolving an HLS playback failure caused by Chrome's lack of MP2 audio transcoding support.
- Sped up the campus internet login portal from 30 seconds - 2 minutes (with frequent timeouts) down to approximately 1 second, by migrating captive portal handling off the routers onto a dedicated server.
- Implemented a biometric attendance capture system for staff and students built on the ADMS protocol.

Backend Engineer (Contract)

January 2026 - Present

Page234

- Designed and built a real-time group chat application from the ground up using Node.js, Socket.IO, React, PostgreSQL, and MongoDB, delivering the core MVP ahead of launch.
- Engineered a reconnection-aware sync mechanism using cursor-based queries, eliminating 100% of message loss during network disconnects by automatically re-fetching the most recent pages on reconnect.
- Prevented duplicate message delivery across reconnects and retries by implementing client-generated idempotency keys, ensuring exactly-once message processing under unreliable network conditions.
- Architected a dual-room websocket structure isolating per-device sync channels from group message broadcast, ensuring reliable delivery across all of a user's active sessions.

Software Engineer (Full Stack)

November 2025 - Present

McGeorge Consulting Ltd.

- Designed and built a production-grade RESTful API (using Node.js and Express) to facilitate the company's onboarding as a System Integrator (SI) and Access Point Provider (APP) for the National Revenue Service (NRS) e-invoicing mandate.
- Implemented end-to-end electronic invoicing workflows compliant with NRS Merchant Buyer Solution specifications, including invoice validation, submission, and status tracking.
- Integrated the API with government-backed invoicing infrastructure (NRS MBS), ensuring secure, compliant data exchange across internal systems.
- Implemented industry-standard observability, structured logging, and robust error-handling practices to improve system reliability, debuggability, and incident response in production.

Frontend Developer

March 2025 - Present

Zoomfood

- Shipped the full MVP web platform from concept to launch in under 4 weeks, achieving load times below 1 second.
- Implemented route-level code splitting, keeping individual application bundle chunks under 2KB (excluding third-party dependencies), significantly reducing initial load time.
- Applied coding best practices and built reusable components, improving maintainability and shortening feature development cycles by over 30%.
- Integrated a RESTful API backed by a MongoDB NoSQL database and AI-powered chatbot into the web application frontend, streamlining MVP testing and reducing order placement time for customers.

Junior Software Engineer (Frontend Focused) *April 2024 - November 2024*

McGeorge Consulting Ltd.

- Co-led agile web app development of Havva, an AI-driven medical diagnostic chatbot that expanded user access to critical health information for hundreds of early users during MVP testing.
- Implemented and optimized complex Figma UI designs with pixel-perfect interfaces using CSS design systems and frameworks such as Tailwind, Bootstrap, and various component libraries.
- Reviewed and refactored project codebases, introducing performance optimizations and reusable components for seamless transitions from vanilla JavaScript to Laravel.

TECHNICAL SKILLS

Languages & Frameworks: React, TypeScript, JavaScript, Node.js, Python

Databases: MongoDB, PostgreSQL, Redis

Deployment & Scalability: Docker, Kubernetes, BullMQ, Nginx

Styling & UI: CSS, Tailwind CSS, SASS, Bootstrap, Pixel-Perfect Implementation

Testing & Quality: Jest, Playwright for Unit & Integration Testing

APIs & Data: RESTful API Development and Integration, GraphQL, Microservice Architecture

Version Control & CI/CD: Git, GitHub/GitLab workflows, CI/CD Pipelines

Development Practices: Agile/Scrum, Test-Driven Development

Reliability & Observability: Logging, Monitoring, Error Handling, Exception Management

PROFESSIONAL SKILLS

- Collaboration & Teamwork
- Communication (Verbal & Written)
- Problem Solving & Critical Thinking
- Adaptability / Learning Agility
- Time Management
- Attention to Detail
- Proactive & Initiative-Driven

EDUCATION

B.Eng. Computer Engineering, University of Ilorin, Kwara State, Nigeria

First Class Honors

2019 - 2025
